## Monitoring intelligence for business-centric IT decisions

\*Monitoring Business Intelligence

IT service management (ITSM) has become pivotal to business success in the digital economy. A critical element to this is IT monitoring intelligence that is easily understood for strategic business decisions.

Centreon MBI is the modular software that delivers this intelligence for Centreon monitoring to aid decision-making in highly-performing IT services. Through ITIL-compliant reporting, Centreon MBI renders operational and performance patterns easy to grasp for business-minded stakeholders. Convincing higher management of the strategic implications behind IT resource optimization, performance and investments becomes a no-brainer.

## 5 insightful reasons for Centreon MBI

**Insightful reporting generated within a day** using the simplified and ready-to-integrate reporting platform of Centreon; it incorporates a dedicated data warehouse and IT monitoring ETL process capable of mass data treatment.

**Over 30 pre-configured ITIL standard reporting templates** that cover operational IT metrics for availability and events, capacity and performance, network traffic, business activity monitoring, virtualization, electrical consumption, profiling, database diagnostic, inventory and configuration.

**Programmed availability to the right person at the right time** with a scheduler that generates cyclical or on-demand reports in multiple user-friendly formats e.g. PDF, Excel, Word, Powerpoint via email, standard file transfer protocols, intranets or internet platforms e.g. FTP, SFTP, CIFS, Dropbox.

**Development of additional business or enterprise specific reports** is facilitated with its open source codes and libraries based on BIRT.

**Readily exploitable monitored information** from Centreon MBI's accessible data warehouse for overall BI correlations and analysis, even when interfaced with other BI tools.

## Monitoring intelligence reporting for better-informed business decisions

**Centreon MBI** (Monitoring Business Intelligence) is a simplified and lightweight reporting module that has been conceived to work with Centreon monitoring systems. The module aggregates, correlates and reports out information from events and measurements in meaningful and readable formats for IT and business decision-makers.

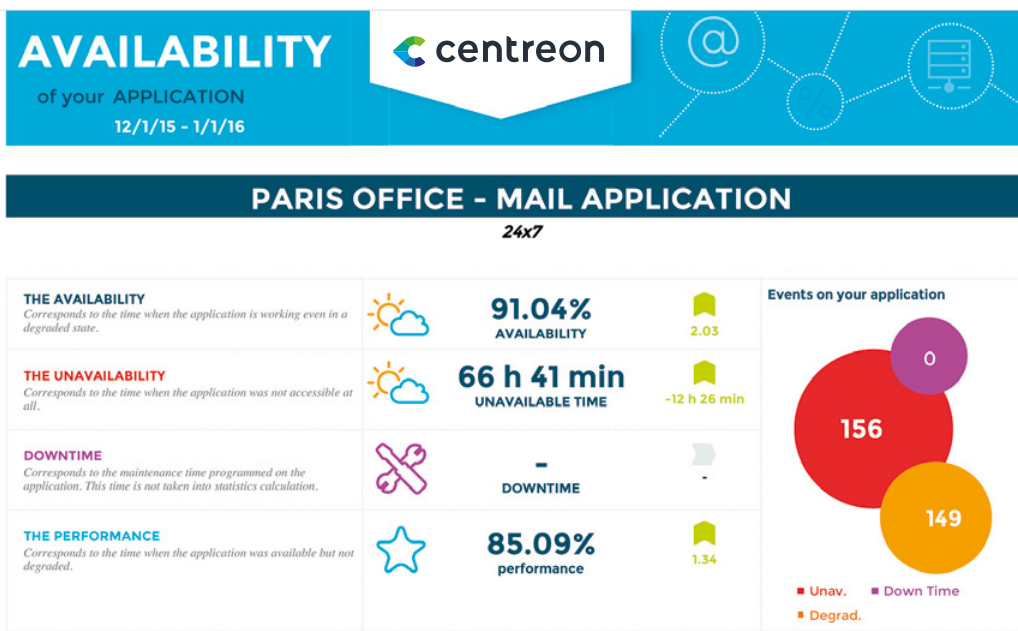

With *Centreon MBI*, there's no need to develop or add a separate tool for reporting monitored data. Over 30 pre-configured reports of essential operational KPIs and its history are ready to be generated as standalone reports for:

- ④ Capacity planning and management
- ④ Availability management
- ④ SLO and SLA management
- ④ Resource optimization and allocation
- ④ Performance management

Using the open source business intelligence and reporting application libraries of BIRT, *Centreon MBI* also enables ITOM teams to extend and develop additional reports tailored to specific information needs.

Even when used with independent BI tools, the monitoring information consolidated by *Centreon MBI* can be accessible to complement other data correlations for more accurate analysis.

APPLICATIONS AVAILABILITIES		centreon					
CIO Critical Applications		FROM 12/1/15 TO 1/1/16					
AVAILABILITY, UNAVAILABILITY AND ALARMS							
Application	24x7	Availability		Unavailability		Alerts	Evol.
		Avail.	Evol.	Unav.	Evol.		
Mail-IDF	24x7	64.46%	3.58 %	272 h 40 min	- 17 h 24 min	624	+ 7
LDAP-IDF	24x7	93.66%	-0.70 %	48 h 40 min	+ 6 h 42 min	156	+ 17
Global DB Oracle Integrity	24x7	95.84%	-0.45 %	31 h 56 min	+ 4 h 19 min	90	-1
Global Offices Availability	24x7	99.75%	0.25 %	1 h 55 min	- 1 h 50 min	8	-3

The Centreon MBI license includes support and maintenance for the software.
