## Easy & instant IT Monitoring for small proactive ITOM teams

\*Instant Monitoring Platform

*SMBs lose \$55K to \$100K per year due to unexpected downtime repercussions.*

*Hardest hit European SMBs are from public sector, retail, finance and manufacturing.*

*SMB's productivity losses exceed that of larger companies, impacting their ability to generate revenues.*

- CA Technologies

**Unplanned IT downtime is very costly for small to mid-size businesses (SMBs). But monitoring IT systems and networks can be a luxury for their much smaller IT outfits. ITOM personnel of SMBs are often DIY superstars. Centreon has recognized this for years by offering free and flexible open source monitoring software.**

**Now with Centreon IMP, professional availability and performance tracking is within easy reach, even for these IT superstars – minus the DIY complications.**

### Centreon IMP for the resource-challenged IT manager

**Centreon IMP** is our first Centreon solution designed for IT professionals managing small to mid-size IT systems and networks! It's light, extremely affordable and instantly operational.

We believe no digital company or IT-driven operations should be deprived of proper and reliable IT monitoring, no matter how small their ITOM or infrastructure. Monitoring should not have to cost an arm and a leg. Nor should it drain precious resources of SMB IT managers.

Founded on the system that has been proven over time with large distributed IT architectures, Centreon IMP simply takes IT operations straight to the essentials. Keeping tabs on the performance of IT systems (servers, networks, applications, services, etc.) becomes a given for resource-challenged IT personnel - open source monitoring rookies included.

## Professional multi-domain IT monitoring for small IT operations

**Centreon IMP** is a highly performing and reliable monitoring solution that has earned its spurs with bigger enterprise ITOM teams.

Simplified for SMB IT managers, *Centreon IMP* eliminates a lot of the DIY steps in automating checks, data extraction, notification and metrics specific to each IT asset for monitoring. As many open source pundits know, spending time searching and retrieving workable plugins or connectors, testing them, writing up scripts, configuring and documenting service templates, etc. could eat up weeks of precious resources.

With *Centreon IMP*, this becomes a mere few hours to proactively monitor what's required. There's no need to build your own, and "doing it yourself" is just a question of clicks to be deployed. Over hundreds of the industry's IT domains, standards and protocols are covered and new plugin packs are included repeatedly.

### With Centreon IMP, SMB IT superstars get...

**A ready-to-run full-featured enterprise-proven** monitoring platform, based on Nagios® concepts and used by hundreds of thousands of IT professionals and businesses worldwide. (Refer to the Centreon factsheet.)

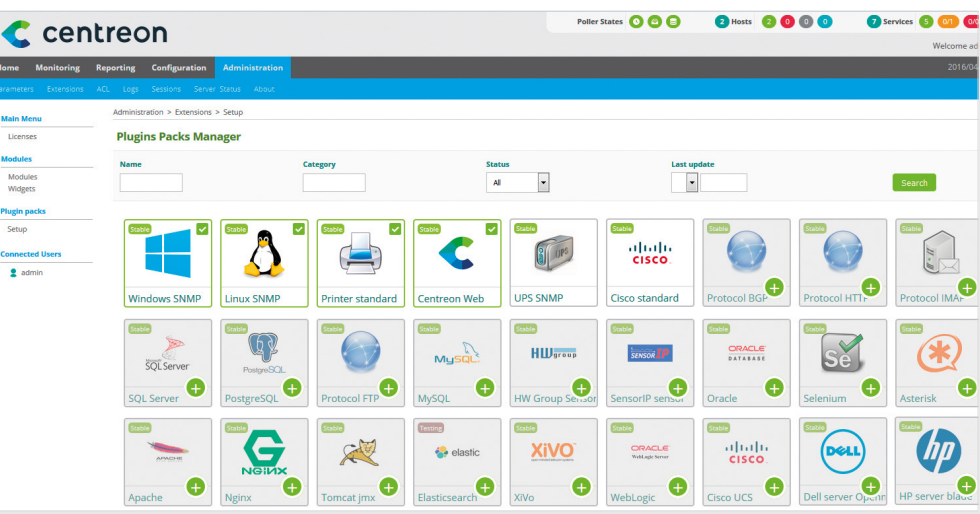

**Online access to hundreds of Centreon-managed plugin packs** with a library of fully pre-configured service templates to immediately plug into hybrid IT systems for deep and broad monitoring.

**Simple installation** with automated functionality to detect new plugin configurations or changes in monitoring evolution.

**Online helpdesk and tutorials** via a dedicated subscriber account to get the most crucial questions answered about using Centreon IMP.

**No lock-in monthly subscription** at €175/month. Check out our other offers from a low €125/month on [www.centreon.com/imp-subscribe](http://www.centreon.com/imp-subscribe).

**An extremely adaptable and scalable monitoring system** for adding advanced functionalities when the time is right, e.g. data-mapping, visualization, business activity monitoring, business reporting, etc. (Refer to Centreon MAP, Centreon BAM and Centreon MBI).

Sign up and save 28% on 1-year of Centreon IMP, or try 5 Centreon plugin packs for FREE!
